***DETAILED ACTION***

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

*The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.*

2. **Claim 1** recites the limitation "said wireless receiver circuit" in line 10. There is insufficient antecedent basis for this limitation in the claim.
3. **Claim 3** recites the limitations of "said power consumption" and "said receiver circuit" as recited in line 7. There are insufficient antecedent basis for these limitations in the claim.
4. **Claim 17** recites the limitation "said wireless receiver circuit" in line 10. There is insufficient antecedent basis for this limitation in the claim.

***Allowable Subject Matter***

5. **Claims 1, 3, and 17 would be allowable** if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
6. **Claims 2 and 4 - 6 would be allowable** if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
7. **Claims 7 – 16 and 18 are allowed.** The following is a statement of reasons for the indication of allowable subject matter:

Regarding to the claimed invention, the prior art of record fails to show or render obvious of a sampling circuit for a receiver in a wireless communication device that utilizes techniques for ensuring the system components do not be saturated by blocker signals as a result of the

Art Unit: 2631

removal of the discrete filter. The dynamic range of a sampling circuit can be altered in the presence of a blocker signal to ensure that the baseband signal is deleted.

Song (US patent # 6,775, 345 B1), Petrus (US patent # 6,177,906 B1), and Dariibi (US patent # 6,066,980) lack of the steps of wireless communication device that utilizes techniques for ensuring the system components do not be saturated by blocker signals as a result of the removal of the discrete filter, or are not applying a filter to the input signal in response to the control signal so that the power consumption of the receiver circuit is minimized, the filter being integrated into the receiver circuit.

### *Conclusion*

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Schollhorn (US patent application publication # 2001/0021939 A1) discloses a method for selective filtering.

Song (US patent # 6,775,345 B1) discloses a delay locked loop based data recovery circuit for data communication.

Petrus (US patent # 6,177,906 B1) discloses a multimode iterative adaptive smart antenna processing method and its corresponding apparatus..

Daribi (US patent # 6,066,980) discloses a near Nyquist rate variable rate receiver.

Casabona et al. (US patent # 5,872,540) disclose digital interference suppression for radio frequency interference cancellation.

9. This application is in condition for allowance except for the following formal matters:

Claims 1, 3, and 7 have been denied under U.S.C. 112., 2<sup>nd</sup> paragraph.

Art Unit: 2631

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
